Hi Eric,

Here are two bullets:

**B3402/C3403 Marina Spill, Jersey City, NJ (Lucarino)** EPA met with the RPs, property owner and NJDEP to discuss ending federal involvement relating to the oil spill. EPA evaluated the magnitude and severity of the discharge or substantial threat of a discharge of oil. Based upon this evaluation, and in consideration of the current state of the subterranean transmission feeder line, and the response activities already undertaken by the property owner, responsible parties, NJDEP, the United States Coast Guard and EPA to date, the EPA has determined the removal action to be complete.

**Sub Base Oil Spill, St. Thomas, USVI (Staiger, Lucarino, Touw)** –EPA is continuing to coordinate the start of on-site work with DPNR, WAPA and Puma. EPA is working with WAPA to coordinate a date to collect samples from recovery wells installed on the WAPA power plant property located on the east side of Krum Bay. The samples will be sent to the USCG Marine Safety Lab for fingerprint analysis to determine if the historical spill from the WAPA property is contributing to the ongoing discharge into Krum Bay. Puma continues to conduct investigative work on their property to determine if historical spills from the facility are contributing to the discharge.

Thanks,  
Kelli
